libibverbs present and future

Roland Dreier

and now libibverbs is 1.1

➢ stick a fork() in it
➢ RTFM
➢ saner driver loading

what comes after 1.1?

➢ 1.2 maybe?

➢ when?

- time-based release?
- around OFED 1.3

any bright ideas?

➢ memory regions
- registering memory stinks
- no, it really stinks
- no, it really, really stinks
- well, it has its good points

any more bright ideas?

- ➢ are we iWARPed enough?
- ➢ does anyone ever call ibv_req_notify_cq()?
- ➢ is there a sane API for QP limits?
- ➢ further verbs extensions
- ➢ QoS
- ➢ mystery features

how dumb can I be?

➢If you're so smart...
