Interop and Plugfest Events

- We discussed upcoming dates for the October and April debug events. Glenn stressed the importance of vendor participation and the benefits these debug events provide: The opportunity to identify possible bugs early, which allows vendors time to address these bugs and fix them before submitting their product for Logo testing.

OFA EWG Status

- We briefly discussed updates included in OFED 3.12-1
  a. OFED 3.12-1 will include the changes to the mlx4 and libibverbs packages.
  b. This build will support RHEL 7
  c. Updates to NFSoRDMA tested by Jeff Becker
  d. Intels Xeon Phi GPUs will now be supported via Intel MIC

April 2014 Interop GA Test Status Updates

- All testing completed, no unexpected results
- Report writing has just begun and UNH-IOL team is working to get those out to all members ASAP.
- Glenn reminded vendors that once vendors have received their reports, they have a two week period to file for arbitration. They also must provide UNH-IOL with their explicit confirmation to post the report online within this same two week period of time.

Opens

- Pradeep from IBM asked to be notified when the daily builds start for OFED 3.12-1
- Pradeep was interested in an outstanding NFSoRDMA bug (can be found here: Bug 2449) , asked if the bug was fixed in OFED 3.12-1, Edward from UNH-IOL had heard from Shirley Ma that the bug was filed upstream, and that we can test this bug once the daily builds are released.
